TOXICOLOGY

CONTENTS

Volume 51 (1988)

Studies on the ability of rat lung and liver microsomes to facilitate transfer and metabolism of benzo[*a*]pyrene from diesel particles (**Both transfer and metabolism of B[*a*]P are slow in the presence of diesel particles**)
by H-W. Leung, R.F. Henderson, J.A. Bond, J.L. Mauderley and R.O. McClellan (Albuquerque, NM) 1–9

Lead-induced changes in the stabilization of the mouse sperm chromatin (**Lead seems to cause a thiol-related stabilization of the chromatin with ensuing decrease in fertility**)
by L. Johansson and C.E. Pellicciari (Pavia, Italy) 11–24

Subcellular toxicity of low level cadmium in rats: effect on cytochrome *c* oxidase (**25 μg Cd/kg lower the cytochrome *c* oxidase activity in liver mitochondria but not in kidney**)
by L. Müller and N.H. Stacey (NSW, Australia) 25–34

Comparison of the inhibitory effects of some compounds present in crude oils on rat platelet aggregation: role of intra- and extra-cellular calcium (**Some components of crude oil may inhibit platelet aggregation by altering the platelet plasma membrane**)
by S. Chaudhury, S. Khan and A.D. Rahimtula (Newfoundland, Canada) 35–46

Sex and strain differences of susceptibility to methylmercury toxicity in mice (**Resistant mice excrete more mercury in the urine and accumulate less in tissues**)
by A. Yasutake and K. Hirayama (Kumamoto, Japan) 47–55

Developmental effects of maternal stress in the CD-1 mouse induced by restraint on single days during the period of major organogenesis (**Increase in extra ribs and trends toward decreased fetal weights and increased embryolethality were fetal responses to maternal stress**)
by N. Chernoff, D.B. Miller, M.B. Rosen and C.L. Mattscheck (Research Triangle Park, NC) 57–65

Enhanced electroretinogram in cats induced by exposure to mercury acetate (**Chronic exposure to mercuric acetate causes a permanent enhancement of ERG**)
by S. Gitter, A. Pardo, N. Kariv and U. Yinon (Tel-Hashomer, Israel) 67–76

Effect of D,L,-*α*-difluoromethyl ornithine on cleft palate induced by the TCDD congener, 3,3′,4,4′-tetrachloroazoxybenzene, in the fetuses of mice (**Embryotoxic effects may be related to activation of ornithine decarboxylase**)
by E.A. Hassoun and A.T. Arif (Baghdad, Iraq) 77–85

Cytotoxic and adaptive effects in rat nasal epithelium after 3-day and 13-week exposure to low concentrations of formaldehyde vapour (**[^{3}H]Thymidine incorporation reveals increased cellular turnover after low levels of formaldehyde vapour**)
by A. Zwart, R.A. Woutersen, J.W.G.M. Wilmer, B.J. Spit and V.J. Feron (The Netherlands) 87–99

An investigation of possible models for the production of progressive pulmonary fibrosis in the rat. The effects of repeated intratracheal instillation of bleomycin **(The histopathological changes after bleomycin are reversible and do not lead to death)**
by R.F.R. Brown, R.B. Drawbaugh and T.C. Marrs (Wright Patterson Air Force Base, OH)..... 101–110

Hepatic ATP content and hyperammonemia induced by CCl_4 in rats **(Hepatic encephalopathy may be caused by decreased hepatic ATP and inhibition of carbamylphosphate and argininosuccinate synthethases)**
by H.-A. Yamamoto and N. Sugihara (Hiroshima, Japan)..... 111–117

Cisplatin-induced lipid peroxidation and decrease of gluconeogenesis in rat kidney cortex: different effects of antioxidants and radical scavengers **(Evidence is given for lipid peroxidation and possible enzyme inhibition as mediators of cisplatin toxicity)**
by J. Hannemann and K. Baumann (Hamburg, F.R.G.)..... 119–132

Role of benzylamine oxidase in the cytotoxicity of allylamine toward aortic smooth muscle cells **(Inhibition of benzylamine oxidase prevents formation of distal toxins from allylamine and abolishes toxicity)**
by R.M. Hysmith and P.J. Boor (Galveston, TX)..... 133–145

Ovulatory response of chlordecone (Kepone)-exposed mice to exogenous gonadotropins **(Mice treated repeatedly with 8 mg/kg of chlordecone produced fewer oocytes)**
by W.J. Swartz, V.P. Eroschenko and R.L. Schutzmann (New Orleans, LA, Moscow, ID and NSTL, MS)..... 147–153

Carcinogenicity study of tetramethylthiuram disulfide (Thiram) in F344 rats **(No evidence for carcinogenic potential was found)**
by R. Hasegawa, M. Takahashi, F. Furukawa, K. Toyoda, H. Sato, J.J. Jang and Y. Hayashi (Tokyo, Japan)..... 155–165

Modification of lethal hypothermic and hyperphagic effects of sodium selenite by reduced glutathione in mice **(Lethality and hypothermic response to sodium selenite are enhanced by coadministration of GSH)**
by C. Watanabe, T. Ohba, H. Nakahara and T. Suzuki (Tokyo, Japan)..... 167–176

Applications of the in vitro aryl hydrocarbon hydroxylase induction assay for determining "2,3,7,8-tetrachlorodibenzo-*p*-dioxin equivalents": Pyrolyzed brominated flame retardants **(A validation for use of the assay is provided)**
by T. Zacharewski, M. Harris, S. Safe, H. Thoma and O. Hutzinger (College Station, TX and Bayreuth, F.R.G.)..... 177–189

Factors affecting the hepatic biotransformation of the phosphorothioate pesticide chlorpyrifos **(Phenobarbital pretreatment enhances the capacity of intact liver to biotransform chlorpyrifos)**
by L.G. Sultatos (Newark, NJ)..... 191–200

Uterine abnormalities in rats exposed neonatally to diethylstilbestrol, ethynylestradiol, or clomiphene citrate **(Luminal epithelium hypertrophy appears to be a useful measure of antiestrogen activity)**
by W.S. Branham, D.R. Zehr, J.J. Chen and D.M. Sheehan (Jefferson, Conway and Little Rock, AR)..... 201–212

Comparative acute systemic toxicity of sodium arsenite and dichloro(2-chlorovinyl)arsine in rabbits **(Higher lewisite toxicity seems to be due to organic moiety)**
by R.H. Inns, J.E. Bright and T.C. Marrs (Wiltshire, UK)..... 213–222

Acute toxicity of methyl isocyanate, administered subcutaneously in rabbits: Changes in physiological, clinico-chemical and histological parameters **(Subcutaneously methyl isocyanate in high doses causes differential changes in clinico-chemical parameters)**
by K. Jeevarathinam, W. Selvamurthy, U.S. Ray, S. Mukhopadhyay and L. Thakur (Gwalior and Delhi Cantt, India)..... 223–240

Effects of acute administration of *O,S,S*-trimethyl phosphorodithioate on the generation of cellular and humoral immune responses following in vitro stimulation **(Enhancement of immune responses by DSS are rapidly reversible)**
by K.E. Rodgers, N. Leung and C.F. Ware (Riverside, CA) 241–253

Formation of methemoglobin by photoactivation of nitrofurantoin or of 5-nitrofurfural in rats exposed to UV-A light **(Photodecomposition of nitrofurantoin leads to hemoglobin oxidation presumably via nitrite formation)**
by R.W. Busker, G.M.J. Beijersbergen van Henegouwen, R.F. Menke and W. Vasbinder (Leiden, The Netherlands) 255–266

Centrally mediated opioid induced depression of hepatic glutathione: Effects of intracerebroventricular administration of Mu, Kappa, Sigma and Delta agonists **(Mu and Delta agonists are effective)**
by R.C. James, W.D. Wessinger, S.M. Roberts, G.C. Millner and M.G. Paule (Little Rock and Jefferson, AR) 267–279

Chlorinated drinking water is mutagenic and causes 3-methylcholanthrene type induction of hepatic monooxygenase **(The concentration of residues seems to lead to as yet unidentified preparations with biological effects)**
by A. Liimatainen, D. Müller, T. Vartiainen, F. Jahn, U. Kleeberg, W. Klinger and O. Hänninen (Kuopio, Finland and Jena, G.D.R.) 281–289

Organ distribution and pharmacokinetics of titanium after treatment with titanocene dichloride **(Titanium has a distribution pattern different from that of platinum and shows no accumulation in tumor tissues)**
by P. Köpf-Maier, U. Brauchle and A. Henssler (Berlin, F.R.G.) 291–298

The effects of aluminum on agonist-induced alterations in cyclic AMP and cyclic GMP concentrations in rat brain regions in vivo (Aluminum neurotoxicity may be mediated by modulation of cyclic nucleotide metabolism)
by G.V.W. Johnson (Birmingham, AL) 299–308

Benzo[*a*]pyrene- and formaldehyde-induced DNA damage and repair in rat tracheal epithelial cells **(Compared to the action of BAP and HCHO alone, combined treatment reduced cell growth, increased DNA single strand breaks and produced less DNA-protein crosslinks)**
by G.N. Cosma and A.C. Marchok (Oak Ridge, TN) 309–320

Announcements 321–322

Contents of journals relating to Toxicology 323–329

Subject Index Volume 51 331–334
